Grand Valley Lakes NewsFlash

April 2022

Are you Interested in Natural Gas for your home?

The Hardeman Fayette Utility District has approached Grand Valley Lakes POA to determine interest in having Natural Gas lines run to homes in the valley. This is a wonderful opportunity for us to increase our home values, as well as enjoy the benefits of using natural gas ourselves. Natural gas is:

- a more reliable source of energy (fewer power outages)
- less expensive/economical energy
- Drilled and refined in the US
- clean burning (fewer emissions of nearly all types of air pollutants and carbon dioxide (CO2) than burning coal or petroleum products -*US Energy Information Association*)

Natural gas connections expand the public utilities available to GVL residents and lot owners potentially increasing their value. Even if you are not interested in having natural gas at your home, the fact that it is available as an option increases the value of your home.

"Whether produced via conventional or renewable methods, the advantages of natural gas as an alternative fuel include its domestic availability, established distribution network, relatively low cost, and emissions benefits."
-US Department of Energy

"Natural gas has many qualities that make it an efficient, relatively clean burning, and economical energy source."
-US Energy Information Association.

If you are interested, please sign the petition in the POA Office. The petition will also be available to sign at the Annual Meeting on April 23.
